

**REITWAY GLOBAL PROPERTY ESG PRESCIENT ETF
MINIMUM DISCLOSURE DOCUMENT &
GENERAL INVESTOR REPORT**

Redefining Investment in Listed Property

31 December 2023

Portfolio Objectives

The investment policy shall be to track as closely as possible the Index with the intention of allowing an investor to obtain market exposure to the constituent securities which are held in the portfolio.

The portfolio will be passively managed in that the Manger will not buy and sell securities based on economic, financial and/or market analysis but rather, will buy and sell securities solely for the purposes of ensuring that the portfolio tracks the Index.

As such the investment objective and style of the portfolio will be full replication of the Index. Accordingly, the financial or other condition of any company or entity include in the Index will not result in the elimination of its securities from the portfolio, unless the securities of such company or entity are removed from the Index itself.

The primary objective is to deliver a credible performance relative to the GPR 250 REIT Index whilst maintaining a minimum ESG ranking of 90%

Mandate Compliance

The fund has adhered to its policy objective as at the date of this report

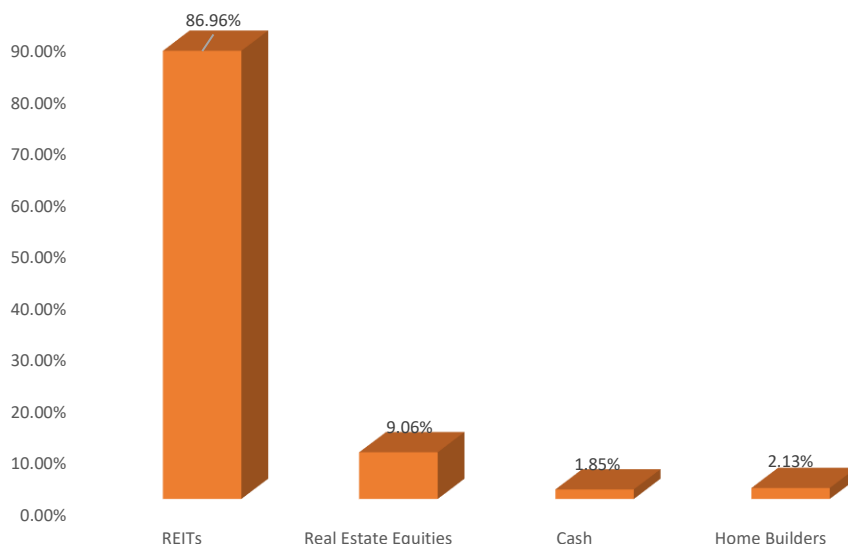

Illustrative Performance

Performance figures will be available 1 year after inception

Tracking error

Annualised Tracking Error (Active Return): Data available 1 year after inception

Glossary

- **Annualised Performance** - Annualised performance shows longer term performance rescaled to a 1-year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.
- **Market cap weighted index** - A market cap weighted index is created by giving weightings to shares according to the company's size (or capitalisation). The larger the company's market capitalisation, the larger its weighting in the index
- **Market capitalisation (or market cap)** - Market capitalisation (or market cap) is the total value of the issued shares of a publicly traded company; it is calculated by multiplying the current share price by the number of shares outstanding. This value is an indication of a company's size (or capitalisation).
- **Passive investment** - Passive investment is a style of investing where a fund replicates the performance a particular market index. Passive investment vehicles include Exchange Traded Funds (ETF's) and index tracking unit trusts. They are so called because the portfolio manager doesn't choose the underlying portfolio. They simply replicate the index they have chosen to track.
- **Total Expense Ratio (TER)** - This is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as auditor fees, legal fees and other expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount on a monthly basis. The annual average of these monthly values represents the TER.
- **Volatility** - Volatility is a measure of 'risk', and refers to the extent to which the price of an investment or fund fluctuates over a certain period of time. Funds with a high volatility usually offer the potential for higher returns over the longer term than low volatility funds but also the potential for significant downside.
- **Basket** - A portfolio of securities comprising all the component securities of the relevant index in the same weighting as they are held on that index.
- **Constituent** - A constituent is a stock which is part of a larger portfolio
- **Central Securities Depository Participant (CSDP)** - Institution established to hold securities and to affect transfer under section 32 of the Securities Services Act, No 36 of 2004 between accounts, typically by book-entry.
- **Distribution Yield** - Accrued income less portfolio expenses, which is distributed to investors
- **Liquidity** - Liquidity is the ease of buying and selling a financial instrument for cash without causing any significant change in its price..
- **Market makers** - The market makers will attempt to maintain a high degree of liquidity through continuously offering to buy and sell participatory interests at prices around the NAV, thereby ensuring tight buy and sell spreads.
- **Net Asset Value (NAV)** - The NAV is the total assets of the portfolio less the liabilities. The NAV is given per ETF share that is outstanding by dividing the total value of the fund by the number of securities that are issued.
- **Rebalancing** - Rebalancing is when the asset manager buys and/or sells constituents in a portfolio in order to bring the portfolio in line with the index being tracked.
- **Scrip lending** - The lending of securities from one party (being the holder of the securities) to another party (the borrower). The borrower provides collateral for the securities borrowed.
- **Securities** - An instrument representing ownership (stocks), a debt agreement (bonds) or the rights to ownership (derivatives).
- **Spread** - The difference between the price at which a market maker is willing to buy a security and the price at which the seller is willing to sell it (the difference between the bid and ask for a given security).
- **Stockbrokers** - A stockbroker can execute your purchase or sale order through the JSE's trading system (stockbrokers need to be registered members of the JSE). As with any share transaction, your broker will attempt to find a sell order for your securities in the market that match against your buy order.
- **Strate** - The electronic settlement system utilised by the JSE and administered by Strate, which facilitates the electronic clearing and settlement for all transactions concluded on the JSE.
- **Exchange Traded Funds (ETF) vs Unit Trust** - In both ETF's and Unit Trusts the investor essentially owns a "proportionate share" (in proportion to the participatory interest held in the fund/portfolio) of the underlying investments held by the fund. With Unit Trusts, the investor holds participatory units issued by the fund while in the case of an ETF, the participatory interest, while issued by the fund, comprises a listed security or share and traded on a Johannesburg stock exchange. ETF shares can be traded by any stockbroker on the exchange or via an administration platform.
- **Tax Free Investing** - This ETF qualifies as a tax-free investment according to section 12T of the Income Tax Act, with effect from 1 March 2015. South African individuals qualify for the associated tax benefits namely no tax on dividends, income or capital gains whilst still enjoying all the benefits of an ETF. Note contributions to tax free investments are limited to R36 000 per tax year, with a lifetime limit of R500 000. Amounts invested in excess of these permissible thresholds are subject to tax penalties.

DISCLAIMER: Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CISs are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER. Exchange traded funds are listed on an exchange and may incur additional costs

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

For any additional information such as fund prices, brochures and application forms please go to www.prescient.co.za. Exchange Traded Funds vs Unit Trusts : Whilst both unit trusts and ETFs are regulated and registered under the Collective Investment Scheme Control Act, ETFs trade on stock exchanges just like any other listed, tradable security. Unlike a unit trust, which can be bought or sold only at the end of the trading day, an ETF can be traded intraday, during exchange trading hours.. None of the information or opinions expressed in this document constitute an offer to sell or the solicitation of an offer to buy securities. This material is for information purposes only. Reitway Global is a registered Financial Services Provider FSP 43747.

Global Property Research acts as the compiler of the Reitway Global Property ESG Index. The compiler of the Reitway Global Property ESG Index shall make every effort to safeguard the accuracy of the composition, publication and adjustment of the Reitway Global Property ESG Index in accordance with the applicable rules. However, the compiler of the Reitway Global Property ESG Index accepts no responsibility whatsoever for any inaccuracy in the share prices, the calculation and publication of the index, the information used to make adjustments neither in the Reitway Global Property ESG Index nor in the adjustments themselves. The index may be recalculated in certain limited circumstances, for example if the index is found to be incorrect or inconsistent. Such restatement will be announced to the market via the issuer's website and via JSE SENS announcements. All data vendors will be informed of such restatement. In situations where an exchange is forced to close early due to unforeseen events, such as computer or electric power failures, weather conditions or other events, GPR will calculate the closing price of the indices based on (1) the closing prices published by the exchange, or (2) if no closing price is available, the last regular trade reported for each security before the exchange closed. If an exchange fails to open due to unforeseen circumstances, this shall be treated as a standard market holiday. The index will use the prior trading day's closing prices and shifts any corporate actions to the following business day.
